👤 SUMMARY

A Computer Science graduate with hands-on experience in AI, machine learning, and full-stack web development. Skilled in Python, JavaScript, PHP, and database management, with a strong foundation in problem-solving from academic and personal projects spanning web applications, data analysis, and AI-powered tools. Looking to bring this experience into a role building practical, real-world software.

🎓 EDUCATION

Bachelor of Computer Science - First Class Honours
STI Myanmar College / University of Bedfordshire (UK)

08/2023 – 05/2026 | Yangon

🧠 SKILLS

- AI/ML Automation: spaCy, scikit-learn, NumPy (NLP-based skill)
- Frontend: React, Vite, Tailwind CSS, Axios, jQuery, Bootstrap
- Databases: MySQL, PostgreSQL, database schema design
- Languages: Python, JavaScript, PHP, SQL, HTML, CSS
- Backend: Node.js, Express.js, RESTful APIs, Sequelize (ORM), JWT Authentication
- Tools & Others: Git (Version Control), Vite/npm tooling, third-party API integration (Twilio, Google OAuth, Nodemailer), DevOps & Containerization: Docker

🌐 LANGUAGES

Myanmar

English

IELTS 6.5

📁 PROJECTS

AI-Powered Volunteer Management System

MyanVolunteer

- Built a bilingual (Myanmar/English) volunteer management platform from scratch, handling application tracking and automated email notifications for organizations and volunteers
- Integrated Ollama/Llama 3.2 to auto-generate volunteer opportunity descriptions, reducing manual content writing for organizations
- Designed a heuristic-based image detection system to flag fake organization logos, improving trust and verification on the platform

TimeTable Management System

STI-TTMS

- Built a role-based academic scheduling platform in PHP, MySQL, and Bootstrap to replace manual timetable creation for a university, serving separate portals for admins, lecturers, and students
- Designed an automated timetable generation engine that assigns courses to lecturers and venues while avoiding scheduling conflicts
- Developed admin-side tools for managing courses, venues, and lecturer assignments, reducing manual coordination work
- Architected class-based backend logic to keep the system modular and maintainable as new features (portals, roles) were added
- Implemented role-based access control so admins, lecturers, and students each see only the data and actions relevant to them

Online Restaurant Management System

FastBite

- Built a full-stack restaurant platform in PHP and MySQL with a customer storefront and a complete admin back office, covering the full order lifecycle from browsing to checkout
- Implemented user authentication with security-question recovery, persistent "remember me" sessions, and login-attempt logout to defend against brute-force attempts
- Developed an admin dashboard with live statistics (orders, revenue, members, menu items) and full CRUD management for foods, categories, time-limited special deals, and orders

AI Agent App

E.C.H.O

- Developed a fully offline Windows voice assistant in Python, avoiding cloud dependency for privacy and speed
- Integrated OpenAI Whisper with CUDA acceleration for real-time speech recognition and Ollama for local conversational responses
- Used Microsoft Edge-TTS for natural-sounding streaming speech output
- Built 15+ voice-triggered system commands (app launching, screenshots, volume control, web search), enabling hands-free PC control
